Your plan

Ms. Wang (retirement) (hypothetical) · Growth profile · figures as of 2026-10-22 · hypothetical client, educational example

Your portfolio

Holding	Weight	Why it is there
Taiwan stocks 0050 (Yuanta Taiwan Top 50)	5%	Growth from the home market.
US stocks 00646 (Yuanta S&P 500)	37%	Growth from the world's largest companies, in USD.
Other markets' stocks e.g. 00645 (Fubon TOPIX)	28%	Spreads equity risk beyond the US and Taiwan.
Long US Treasuries 00679B (Yuanta US Treasury 20+ Year)	9%	Cushion when stocks fall sharply.
Medium-term bonds a Taiwan-listed investment-grade bond ETF	11%	Steady income with less rate risk.
Gold 00635U (Yuanta S&P GSCI Gold ER Futures)	10%	Protection against inflation and crises.

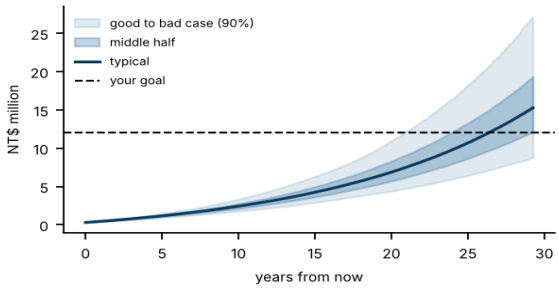

Built with Black-Litterman (market-implied returns, adjusted to your profile), with momentum tilts, a market-stress filter and volatility targeting. Horizon 29 years and very stable income give a growth capacity for risk; selling/holding/buying after a 20% fall ('buy more') indicates a growth tolerance. The profile is the more cautious of the two: growth.

Your chance of reaching the goal

About 8 in 10 simulated futures reach NT$12,000,000 by 2056.

Typical outcome: NT$15,270,918. A bad case (1 in 20): NT$8,723,651; a good case: NT$27,197,221. You will have paid in NT$3,810,000.

10,000 simulated futures of this portfolio's own after-cost returns. Two simulation methods were used; this page shows the more cautious (76% vs 78%).

What a bad year could look like

In a crisis like 2008, this portfolio might have fallen about 34% and taken about 29 months to recover. In a year like 2022, when stocks and bonds fell together, this portfolio might have fallen about 13% and taken about 8 months to recover.

What would raise your odds

Contribute NT$2,000 more a month	**88% chance**
Aim for 2058 instead of 2056	**87% chance**

When we will contact you

We rebalance your portfolio back to its targets on the last trading day of every quarter (March, June, September, December). We also check it at the end of every month and adjust it when our risk signals change by more than two percentage points. If your portfolio falls 22.5% from its peak (three quarters of the 30% loss you told us you could accept), your advisor will contact you to review the plan. Nothing is sold automatically: a person decides.

Limits of this analysis

These figures come from simulations based on 2004-2026 market history, after estimated fees and taxes. They are not guarantees: markets can do things they have not done before. This is an educational research project using hypothetical clients, not investment advice; the funds named are representative Taiwan-listed instruments, not recommendations.
